

## FAQ

### General Questions:

**Does EVO Spray give me a bigger speed range?**

Yes. EVO Spray utilizes PWM application, allowing speed to be independent of rate and pressure for a consistent application regardless of terrain.

**Will the Pulsing cause skips in the field?**

No. EVO Spray features blended pulse technology that overlaps every other nozzle's spray pattern while the other phase is not spraying for an even application.

**What does the turn compensation do?**

Turn compensation automatically changes the flow across the boom to adjust for the different boom speeds in a turn, which provide an on-rate application with no skips or crop burn.

**Does the EVO Upgrade Kit run off only existing power source?**

Yes. The EVO platform performs with ultra low power consumption, requiring no additional electrical provisions.

**Does EVO Spray do individual nozzle control?**

No, EVO Spray is sectional control up to 16 sections. The CapstanAG PinPoint II comes standard with individual nozzle control.

**How long does this take to install?**

EVO Spray can be installed as a first time installer in half a day.

**Can I still choose to spray conventionally?**

Yes, EVO Spray can spray in manual mode, at 100 percent DC, will imitate a conventionally spraying application.

**Does EVO have a fail safe mode?**

Yes. EVO Spray goes into an alternate control mode that allows you to keep spraying at a fixed duty cycle, or can be shut off entirely.
