

FAQ

General Questions:

How does SelectShot work?

SelectShot delivers a dose of product per seed based on seed population, desired rate per acre, and desired shot placement. The shot is triggered via the seed sensor.

Does SelectShot work with high speed planters?

Yes. SelectShot is compatible with all high speed planter systems on the market.

What will Selectshot do for my yield?

SelectShot will deliver the proper dose per seed based on your population and per acre desired rate in the optimal or desired location to optimize your yield potential.

Will SelectShot save me on inputs?

Yes. By not wasting product between seeds that does not help plant growth, SelectShot allows you to go further per load of product and be just as effective of an application.

Is SelectShot compatible with my current tractor monitor?

Yes. SelectShot is compatible with most all current VT monitors on the market for a simple and seamless integration.

How long does this take to install?

SelectShot installation can be done in approximately an hour a row per installer.
