

SelectShot™

Liquid Control, One Shot At a Time.

SelectShot is the in-furrow liquid application system, patented by CapstanAG. SelectShot delivers a precise dose-per-seed, optimizing inputs and maximizing yield.

As the seed sensor is triggered, the exact dose of liquid product is delivered based on the settings entered on your existing VT monitor.

Start your planting season with a select dose of liquid product at the seed level. Instead of gallons per acre, SelectShot delivers the set dose-per-seed right where it's most effective.

More time planting, less time filling.

Achieve more with **SelectShot.**

Increase your farm's profitability with sustainable production.

SelectShot™

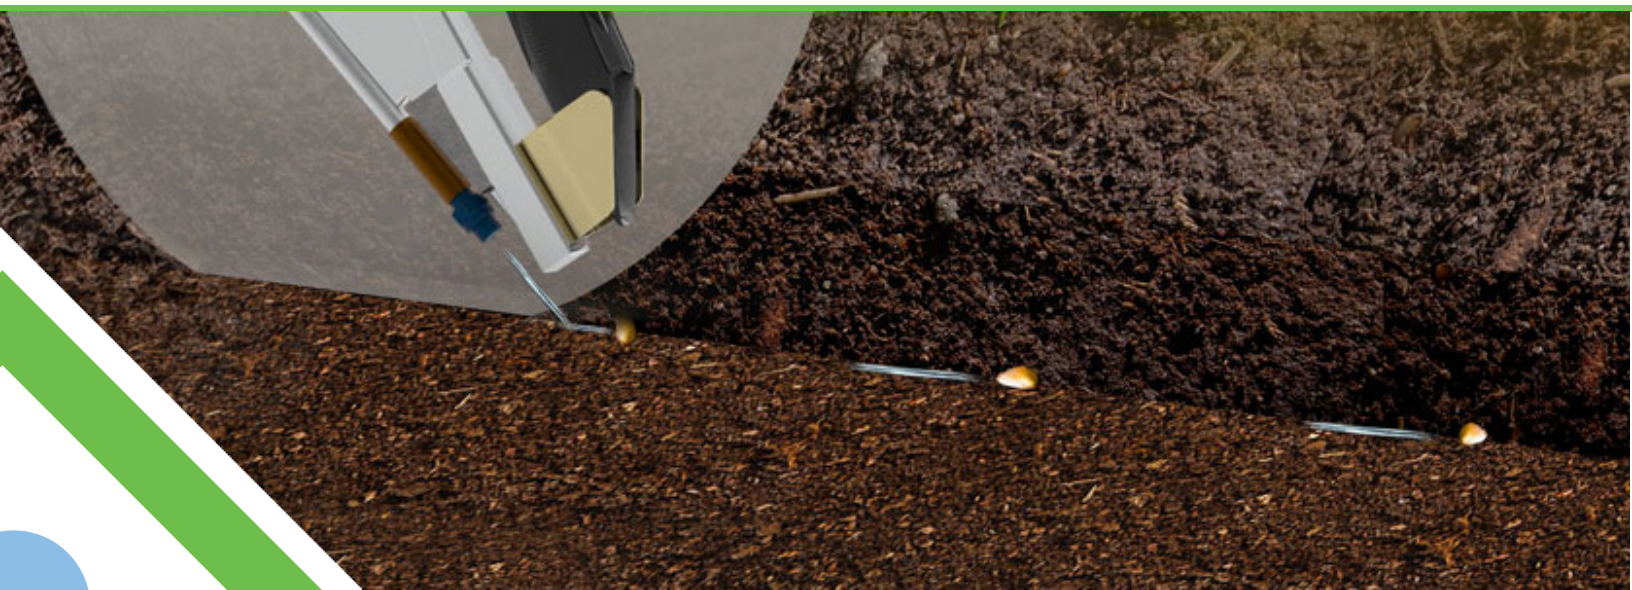

Liquid Control, One Shot At a Time.

FEATURES

Dose-Per-Seed Application
ISO-Compliant VT Interface
Real-Time System Diagnostics
High-Speed Compatible

BENEFITS

Economic Input Control
Increased Production Time
Maximized Yield Potential
Sustainable Impact
