Integration Instructions

PinPoint™ III ENVELOP on Case IH 3000-4000 Series

Note: prior to performing any setup on the machine, perform the factory reset procedure.

Tap the **Settings** icon ![wrench icon] and select **Initial Setup > Configuration > Factory Reset > Yes.**

Below is an example of the PinPoint III home screen.

Figure 1 — Task Controller Home Screen

Menu Setup

1. *Figure 1*: Select CapstanAG PinPoint III icon ![icon] from program icons on the left side of the task controller screen. This icon may be located in slightly different places depending on the task controller.

   Note: ANYTIME you change settings, you MUST tap the **Settings** icon ![wrench icon] to go into the **Settings** menu and select **Initial Setup > Configurations > Software Restart** to save settings. If the unit is turned off or loses battery power before this is done, the new settings will not be saved. Refer to *Figure 6* for the location of this function.

Figure 2 — PinPoint™ III Home Screen

2. *Figure 2:* Basic running settings and information are displayed on the PinPoint™ III home screen. The boom configuration can be selected from the saved configurations at the bottom of the screen. To edit these configurations and set up other features of the PinPoint™ III software, tap the **Settings** icon at the right side of the screen.

prodsupport@capstanag.com | 855-628-7722
CapstanAG.com | CapstanAG.ca

4. Select **Initial Setup** > **VCM Setup > Geometry Setup**

Note: Complete this step BEFORE performing any other boom setup.
Figure 4 — Geometry Setup

Note: The green dot on the display indicates the position of the selected VCM (highlighted in yellow) in relation to the nozzles on its hub CAN channel.

5. *Figure 4:* VCMs must be in the correct order and orientation on the boom. If there is only one VCM connected to a hub CAN channel, use the **Swap Ends** icon ![Swap Ends] with that VCM highlighted to orient the VCM correctly on the boom. VCMs can be mounted with the tube towards the center of the machine (green dot) and the pigtail running towards the outside tip, or vice versa.

If two VCMs are located on the same hub CAN channel, first use the **Swap VCM** icon ![Swap VCM] with these VCMs highlighted to orient them correctly left to right, and then make sure the orientation (swap ends) is correct.

6. Use the **Left** and **Right Scroll** icons ![scroll icons] to scroll through all the VCMs installed on the machine. Verify each of their locations and serial numbers. When the orientation and position of VCMs is correct, all the VCMs will show in order left to right on the screen exactly as they do across the boom on the machine.

prodsupport@capstanag.com | 855-628-7722
CapstanAG.com | CapstanAG.ca

7. Verify the order and orientation of the VCMs using the unit key fob or Capstan app.

    Note: This MUST be done before continuing any further with setup. Failure to verify the VCM orientation will result in incorrect automatic nozzle shutoff.

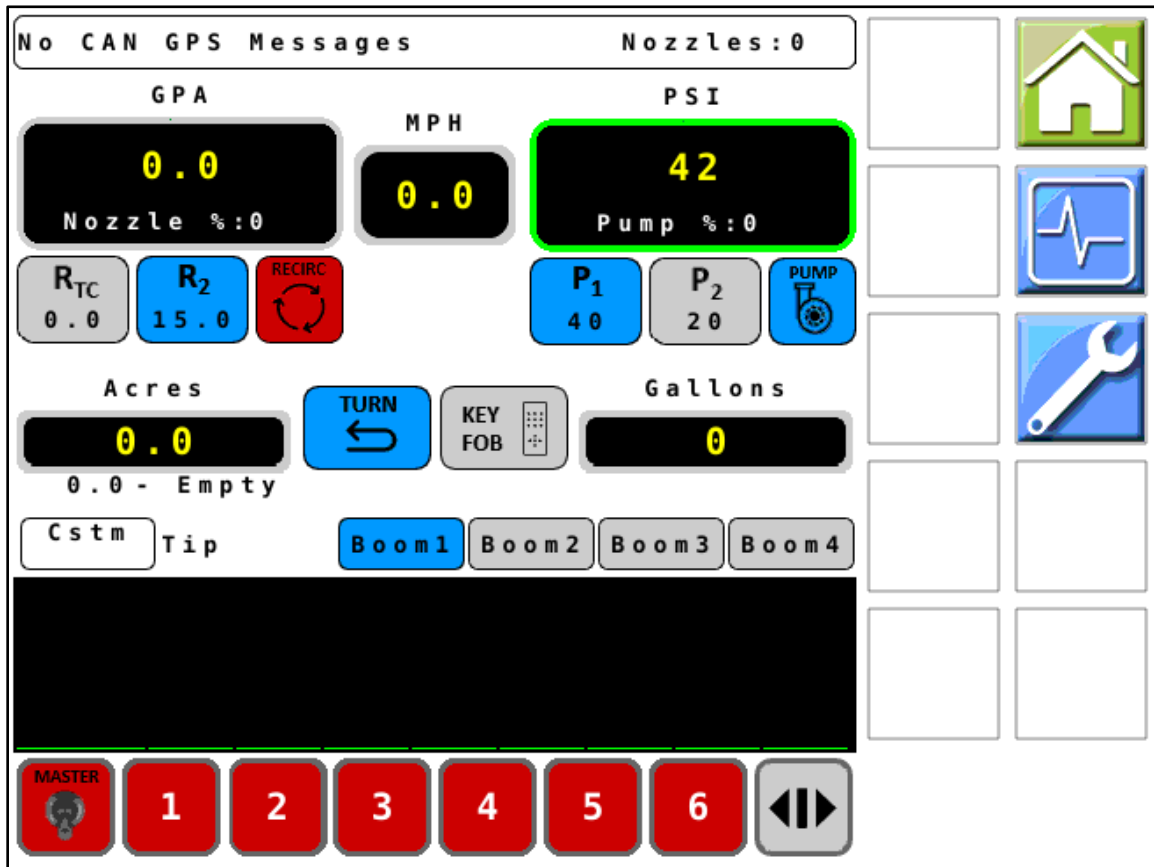

Figure 5 — Key Fob Verification

    Note: The CapstanAG Mobile App can be used with the system in key fob mode for this test procedure.

8. *Figure 5:* Tap the **Home** icon to return to the home screen.

9. Tap the **Key Fob** icon to set key fob mode to **ON**.

10. Locate the key fob remote control or use the Capstan app. Using the right arrow key on the key fob or the app, turn on each of the nozzles one at a time across the boom. If the VCM orientation and position is correct, the nozzles will turn on in order left to right across the boom. If the nozzles do not turn on in the correct order, navigate back to the **Geometry Setup** screen and correct any errors.

13. *Figures 7 & 8:* Use the **Scroll Down** icon ![icon] to view the second and third pages and verify the values on your unit correctly match your machine's specifications. Change values if necessary.

Figure 7 — Configurations Page 2

Note: Line 16 is the **Software Restart** function used to save settings after editing. If the unit is turned off or loses battery power before this is done, the new settings will not be saved.
Note: The Maximum TC Sections field must be greater than or equal to the number of nozzles on the boom, with the exception of rate controllers which will not accept as many nozzles. For example, the Pro 700 only accepts 32 sections.

Figure 8 — Configurations Page 3

Note: Ensure that **CASE** is shown in the **Fill Station** field. This is only applicable on Case IH machines.
