

Achieve optimal results with the breakthrough technology of EVO™LFS - The CapstanAG liquid fertilizer control system for air drill and air seeders.

Real-Time In cab display, coupled with a manifold designed specifically for air drill and air seeder application

It has never been easier to expand your fertilizer placement and application. EVO LFS provides turn compensation, variable rate, and sectional control for your liquid fertilizer application to ensure each row gets the required rate, regardless of turning or obstacles.

EVO LFS is designed to work with existing seed sections and provide a row-by-row variability of less than 5% for unmatched application accuracy.

EVO LFS Features

- TURN COMPENSATION
- VARIABLE RATE COMPATIBLE
- AVAILABLE UP TO 16 SECTIONS
- IN-CAB USER INTERFACE AND DIAGNOSTICS
- COMPATIBLE WITH PAIRED ROW, SIDE BAND, AND MID ROW OPENER SYSTEMS.
- EASY TO INSTALL AND SERVICE COMPONENTS
